## Fieldline Modular Device With Four Digital Inputs and Four Digital Outputs

This data sheet is only valid in association with the FLS FLM SYS INST UM E user manual or the Fieldline user manual for your bus system (see "Ordering Data" on page 15).

## Function

The device is designed for use in the Fieldline modular local bus, which is opened by a Fieldline modular bus coupler. It is used to acquire and output digital signals.

## Features

- Connection to the Fieldline modular local bus using M12 connectors (B-encoded)
- Connection of digital sensors using M12 connectors
- Connection of digital actuators using M12 connectors, each with a load capacity of 2 A (nominal current)
- Flexible voltage supply concept
- LED diagnostic and status indicators
- Short-circuit and overload protection of outputs and sensor supply
- IP65/IP67 protection

## Connection Notes

Meet noise immunity requirements
Connect FE using a mounting screw or a cable connection to the FE connection latch (when mounting on a non-conductive surface).

Ensure degree of protection
To ensure IP65/IP67 protection, cover unused sockets with protective caps.

Observe connection point assignment
When connecting the sensors and actuators, observe the assignment of the connection points to the IN and OUT process data (see "Process Data" on page 8).

## Avoid polarity reversal

Avoid polarity reversal of the supply voltages $\mathrm{U}_{\mathrm{L}}, \mathrm{U}_{\mathrm{S}}$, and $\mathrm{U}_{\mathrm{A}}$ in order to prevent damage to the device.

Avoid damage to the electronics
Make sure you only supply the sensors with the voltage $U_{S}$ provided at the connection points.
