## FEATURES

An eco-friendly switch-replacing a mercury switch with steel ball inside High corrosive gas resistance-sealed construction by $O$ ring assures high contact reliability

## TYPICAL APPLICATIONS

- For detection of tip

Gas heaters
Electric air conditioners
Electric fans

- For criminal detection

Vending machines
Public phones
Ammusement equipments

## ORDERING INFORMATION

| Vertical mounting type | Part number | Horizontal mounting type | Part number |
| :---: | :---: | :---: | :---: |
|  |  |  |  |

## SPECIFICATIONS

## 1. Contact rating

0.1A 30VDC

Applicable range: 1 mA 5 VDC to 0.1 A 30 VDC
2. Characteristics

| Expected electrical life | 0.1A 30VDC resistive | Min. $5 \times 10^{3}$ |
| :--- | :--- | :---: |
| (Min. operations) | 1mA 5VDC resistive | Min. $10^{6}$ |
| Insulation resistance | Min. 100 m at 500 VDC |  |
| Dielectric strength | 100 Vrms for 1 min. |  |
| Vibration resistance | $2.9 \mathrm{~m} / \mathrm{s}^{2}\{0.3 \mathrm{G}\} 40$ to 400 Hz for 7 days 5 to 10 Hz at double amplitude of $10 \mathrm{~mm}, 5 \times 10^{5} \mathrm{cycles}$ |  |
| Shock resistance | $588 \mathrm{~mm} / \mathrm{s}^{2}\{60 \mathrm{G}\}, 6$ directions, 3 times $/$ each direction |  |
| Ambient temperature | $-25^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C},-13^{\circ} \mathrm{F}$ to $+185^{\circ} \mathrm{F}$ <br> (not freezing below $0^{\circ} \mathrm{C} 32^{\circ} \mathrm{F}$ ) |  |
| Ambient humidity | Max. $85 \% \mathrm{RH}$ |  |
| Initial contact resistance | Max. 100 m | (by voltage drop, 0.1 A 6 to 8 VDC) |

## 3. Operating characteristics

| Operating angle <br> (angle of turning off the circuit) | Goes off at more than 25 and less than 60 <br> degrees in relation to the reference line (with <br> an operation angle of 6 degrees/second in the <br> X and Y directions) |
| :--- | :--- |
| Release angle <br> (angle of turning on the circuit) | Goes on at 20 degrees or more (in the X and <br> Y directions) |

HORIZONTAL MOUNTING TYPE

## NOTES

## 1. Soldering operations

1) for manual soldering

Soldering should be accomplished in less than 8 seconds with a 60 watt iron max. (iron tip temperature: Max. $350^{\circ} \mathrm{C} 662^{\circ} \mathrm{F}$ )
2) For automatic soldering

Soldering should be done less than 10 seconds in $260^{\circ} \mathrm{C} 500^{\circ} \mathrm{F}$ solder bath or less than 3 seconds in $350^{\circ} \mathrm{C} 662^{\circ} \mathrm{F}$ solder bath.

## 2. Environment

Avoid using and keeping switches in the following conditions.

- In corrosive gases
- In a dusty environment
- Where silicon atmosphere prevails

## 3. Quality check under actual loading conditions

To assure reliability, check the switch under actual loading conditions.

## 4. Recommended circuit for tip

 Contact chattering may happen when vibration or shock is applied to the switch because of a leaf spring and steel ball inside. Please detect a signal by following procedure.1) Read access by a microcomputer should be done every 30 msec . at 1 mA 5VDC.
2) Two reading 'open' in succession should be judged as 'open' condition. 3) After the judgement, if the 'open' condition continues for more than 0.5 sec ., the condition should be confirmed lastly.
<Example>
Microcomputer read access

## 5. Others

- Switch cover is set to the body through O-ring for sealing purpose. Do not disassemble the switch or the characfteristics may change.
- For switching of inductive loads (relay, solenoids, buzzars, etc.), in order to prevent damage to contacts due to the occurrence of arcing, an arc absorbing circuit should be applied.
